HIGHLY PROGRAMMABLE CONTROL FOR EASE OF USE AND FLEXIBILITY

Any Milnor machine equipped with the MilTouch™ microprocessor can help users dictate the gentle treatment needed for wetclean operations. They can also deliver high G-force extraction, making them ideal for dual use as a shirt machine or for washing comforters, drapes or other goods. The MilTouch control delivers enhanced programming features. When matched with the proper chemicals, it is the most versatile choice in our industry for cleaning many types of delicates. These machines can deliver rotational speeds that are equivalent to hand washing in a sink.

SUPERIOR CYLINDER DESIGN

Milnor's superior cylinder design and tall, lifting ribs yield greater wash/rinse quality while delicately processing goods.

Rigid-mount machines with the MilTouch control are a cost-effective wetcleaning solution for many businesses.

Soft-mount machines with the MilTouch control have vibration control systems that allow installation in a wide variety of locations.

Dryers equipped with residual moisture control (RMC) can carefully remove moisture from delicate items, preserving many fabrics.

Optional signals for up to 12 chemicals allow these units to accommodate a wide variety of formulas and process a broad range of goods.

DUAL-USE MACHINES DELIVER BEST VALUE FOR YOUR BUSINESS

The high level of programmability in these machines allow operators to consistently and safely process a wide variety of goods. Water levels, temperature and drum rotation can be accurately managed for careful processing of wetclean goods. The same control can also easily clean traditional laundry like shirts and other washable items. For best results, wetclean goods should only be loaded to approximately half of the rated capacity of laundered items.

GREAT RESULTS IN FIELD

A Milnor dealer can provide detailed support to you on the best machinery for your operations, including tensioning equipment. Contact Milnor or your Milnor dealer to learn more about our wetcleaning systems.

RINSAVE® WATER SAVER FEATURE

The innovative RinSave® Water Saver feature allows a precise G-force to "sling" the wash liquor (including water, chemistry, and soil) out of the goods after a wash step – saving up to 2 rinses per load and fill/rinse time.
