

In an effort to **conserve** water locally & **reduce** waste globally.
we will make your bed every day.
If you would like your linens changed please place this card on the bed in the morning.
We are here to serve you and as always,
the choice is yours.

There is a better way to save on laundry.

Take control of your conservation efforts instead of leaving them in the hands of your guests. Milnor has a new solution for mid-sized hotels and hotel compounds looking to save both time and money. Milnor's five-module "short" tunnel washers can have a significant effect on your water and energy consumption, without compromising linen quality your guests deserve. We're talking about using as little as 0.3 gallons of fresh water per pound of room linen instead of 2 or more gallons in a large washer-extractor.

No matter what level of soil or class of goods, facilities across the country have seen remarkable improvement in wash quality with a dramatic reduction in water usage and energy. All-told PulseFlow® tunnels have saved more than 500,000,000 gallons of fresh water so far. And now, if your facility washes 1,000 pounds of linens an hour or more, you can take advantage of PulseFlow technology in a new, smaller tunnel.

Contact an authorized Milnor distributor or call 504-712-7656 to find out more about getting big savings with a modest footprint.
