

Is your laundry costing you?

Milnor has a new solution for mid-sized hotels and hotel compounds looking to save both time and money.

Milnor's five-module "short" tunnel washers can have a significant effect on your water and energy consumption, without compromising linen quality your guests deserve.

We're talking about using as little as 0.3 gallons of fresh water per pound of room linen instead of 2 or more gallons in a large washer-extractor.

No matter how dirty your sheets, towels, or tablecloths are, hotel laundries across the country have seen remarkable improvement in wash quality with a dramatic reduction in water usage and energy. All-told PulseFlow[®]* tunnels will save more than 500,000,000 gallons of fresh water this year alone. And now, if your facility washes 1,000 pounds of linens an hour or more, you can take advantage of PulseFlow technology in a new, smaller five-module tunnel.

Contact an authorized Milnor distributor or call 504-712-7656 to find out more about getting big savings with a modest footprint.
